OEM
MECHANICAL RELEASE MODULE
Commercial Kitchen Fire Suppression
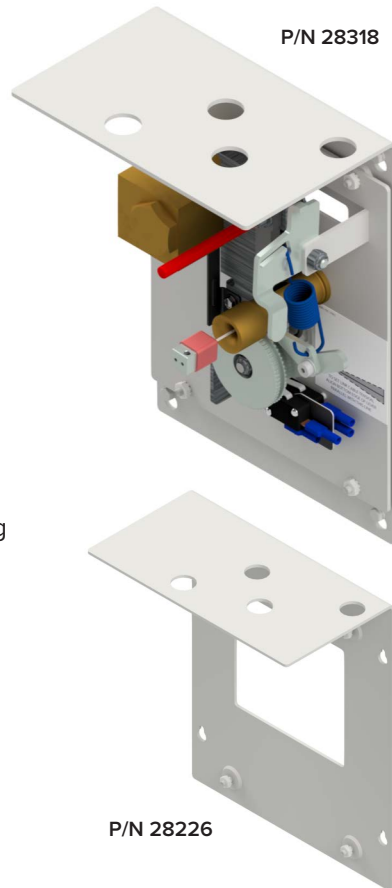

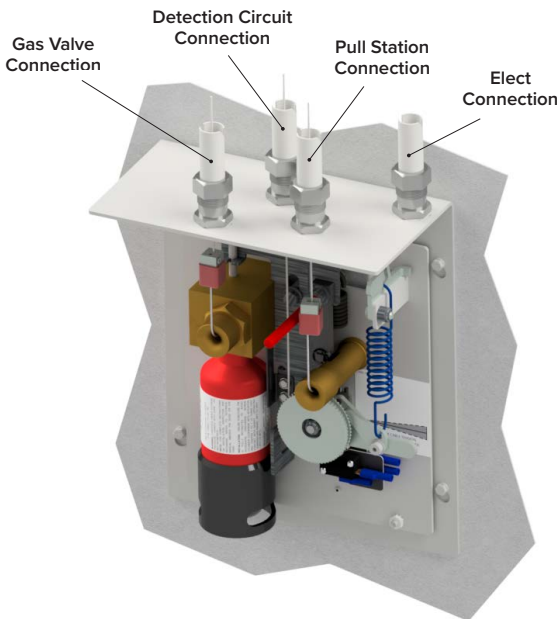

QUICK, SIMPLE, AND EASY-TO-USE OPTION
FOR INTEGRATED COMMERCIAL KITCHEN DESIGNS

P/N 28318

Streamline your commercial kitchen design with the New OEM Mechanical Release Module (MRM) for use with the Amerex KP System. Built to fit the growing needs of integrated kitchen designs, Amerex introduces an OEM version of the MRM. The OEM MRM (**P/N 28318**) allows for easy installation and access within the end cabinet or utility chase of the kitchen ventilation system. This new option was designed with OEMs and chain accounts in mind. With the complexity of rapidly expanding foodservice chains, equipment managers and franchise owners need partners that are working to simplify their store environment and promote proper maintenance of equipment. The OEM MRM allows for ease of design and implementation at the OEM level and standardizes equipment service and commissioning by Amerex Distributors.

With top mounted conduit cut outs for the detection network, manual pull station, gas valve shut-off, and electrical contacts to equipment shutdowns and alarm-initiating devices, the OEM MRM makes in-enclosure deployment effortless.

It also utilizes the same mounting hole pattern as the MRM (P/N 18001), to allow for seamless retro-fit upgrades to existing systems.

Gas Valve Connection
Detection Circuit Connection
Pull Station Connection
Elect Connection
